Type of Sector

Viticulture

Accepted type of products

Data, Design / Documentation

Type of service

Collection of test data, Data augmentation

Description

IFV has national French experts that cover all the fields from vine plant grafting to wine bottling, including crop protection, agronomy, and machinery. If you think of a use case with added value brought by AI, contact us to define the best way to collect quality data in the vineyard or in the cellar. We will guide you through the data collection process, finding the best places and the right moment.

How can the service help you

This service may help you if you're new to the viticulture sector with a data-driven technology that could bring a valuable use case thanks to detection or prevision. If you need to be guided through your first steps in viticulture and oenology to create a valuable dataset, contact us.

How the service will be delivered

Our objective is to provide the greatest possible flexibility in our services, and we look forward to discussing your specific requirements.

Service customisation

This service can be delivered all year long; it requires a few meetings to understand your technology, what you are thinking of in terms of use case for viticulture, and how we can help you to collect useful data. Then we bring you to the field, or in the cellar, to imagine how we will collect the data.
