Type of Sector

Livestock farming

Accepted type of products

Data

Type of service

Data analysis, Provision of datasets

Description

WUR experts are available for analysis or advice to extract information from large and multiple-source data sets as provided with the service "Provision of specific and long-term data sets for arable and livestock farming data from the Farm of the Future experimental farms (S00132)." It is also possible to analyse datasets of clients that are used for the development of sensors, AI, and robotic solutions.

How can the service help you

Clients have a need for specific information that can be used to understand the process or the situation for which they try to make a sensor, AI, or robotic solutions. Information can be extracted from specific datasets. Knowledge of the agricultural environment and data analytics needs to be combined.

How the service will be delivered

Data sets and types of analyses needed will be discussed with the client.

Service customisation

The service is delivered as a report and sometimes as advice in a presentation.
