

Service ID S00342

Location Remote, Spain

Evaluation and testing on the efficiency of SaaS platforms

Provider service

Universidad de Córdoba

Link to content

<https://www.agrifoodtef.eu/services/evaluation-and-testing-efficiency-saas-platforms>

Type of Sector

Arable farming, Horticulture, Tree Crops

Accepted type of products

Data, Software or AI model

Type of service

Collection of test data, Data analysis, People training, Performance evaluation, Test design, Test execution, Test setup

Description

Evaluation and analysis of the efficiency of algorithms integrated into SaaS platforms that perform specific processes, such as the calculation of parameters from processed data. The primary objective is to detect weak points in the performance of the platform and evaluate the execution times.

How can the service help you

This service helps the customer to evaluate the performance and efficiency of their algorithms so they reduce their execution times and enhancing performance. It ensures faster and more reliable data processing without compromising accuracy. This leads to smoother operations and better results for your processes.

How the service will be delivered

The service can be tailored to meet the specific needs of each client. This includes focusing on particular algorithms or processes within SaaS platforms and choosing between material-based evaluations or collaborative sessions. The customisation ensures the optimisation process aligns with the client's goals and operational requirements.

Service customisation

The service will be delivered either by evaluating material provided by the company or through joint sessions where the material is reviewed collaboratively. These approaches allow for a flexible and effective evaluation process.
