Type of Sector

Arable farming, Greenhouse, Horticulture, Livestock farming, Tree Crops, Viticulture

Accepted type of products

Design / Documentation, Software or AI model

Type of service

Desk assessment

Description

This service consists of a detailed analysis of the customer's system, software, or AI solution. It is a preliminary step for testing and validation services, providing important information on the solution and leading the following activities. As a consequence, the detailed mapping of the solution can help the customer understand bottlenecks and better prepare the solution for testing and validation activities.

How can the service help you

This service will offer the client a deeper understanding of its proposed solution from a performance validation perspective. It will give the customer an overview of its product, highlighting its strengths and weaknesses, especially with regards to performance issues that might affect its scaling up.

How the service will be delivered

It is mandatory that the client provide FBK with all the information needed to allow an appropriate understanding of the solution from both an architectural and a deployment point of view. An analysis of the requirements the solution must fulfil when in the market can lead to customised assessments and consequent improvements from those two viewpoints.

Service customisation

The service duration is approximately 8 weeks, adjustable as needed. There are no limitations in terms of seasonality, and it will be executed from remote, leveraging all the information on the developed solution sent by the customer (under NDA).
